

Leeds United Football Club Louvred Screening Fence

49ers Enterprises Ltd, the corporate venture capital arm of The San Francisco 49ers focused on sport, has acquired full ownership of Leeds United Football Club with a commitment to bring fresh leadership, management and investment.

Recent improvements at the Club have included a steel louvred fence.

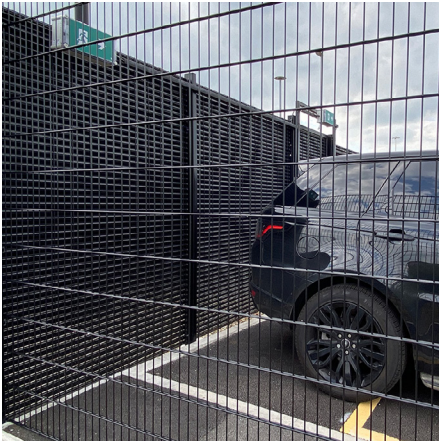

Installation: Burn Fencing

Category: Louvre Fences

Product: Italia-100

Project: Leeds United FC - Elland Road

Lang+Fulton supplied an Italia-100 steel louvred fence to screen the parking area for coaches at the Club. Italia-100 provides a high level of security with anti-climb properties and 100% visual screening. The fencing stretches to 111 linear metres behind the West stand of the stadium.

Each RHS post was double-holed to allow for the installation to be stepped along the entire length of the fence run to accommodate the gently rising ground. Access for the coaches was provided through an extra wide 7450mm double leaf gate.

The specification for the fencing and gates was for a height of 2500mm. This was achieved by seamlessly stacking an extension panel on top of the standard 1975mm panel with a flat bar frame on either side.

The panels posts and gates were hot-dip galvanized and polyester powder coated for a durable, long lasting finish.

Lang+Fulton are specialists in the supply of louvre fences and custom-designed louvred structures. The robust steel construction is significantly stronger than aluminium for any ground level project. A wide range of products are available, providing alternative levels of visual screening and a choice of aesthetic.
